Carry out the four operations with rational numbers and positive integers, using efficient mental and written strategies and appropriate digital technologies. Investigate index notation and represent whole numbers as products of powers of prime numbers Order of operations involving integers BIDMAS."		Introduce the concept of variables as a way of representing numbers using letters. Introduce pronumerals as preparation for application in Geometry Create algebraic expressions and evaluate them by substituting a given value for each variable		Use the language, notation and conventions of Geometry. Recognise the geometrical properties of angles at a point. Identify corresponding, alternate and co-interior angles when two lines are crossed by a transversal. Investigate conditions for two lines to be parallel. Solve simple numerical problems (no reasons).			Use the language, notation and conventions of Geometry. 	Classify triangles according to their side and angle properties Identify line and rotational symmetries Demonstrate that the angle sum of a triangle is 180° and use this to find the angle sum of a quadrilateral.		<ul style="list-style-type: none"> Solve problems involving addition and subtraction of fractions, including those with unrelated denominators. Multiply and divide fractions using efficient written strategies and digital technologies. Calculator key Use fraction keys and perform all operations. 			Please Note: This topic is designed to cover both decimals and measurement. In finding perimeters and areas students will need to be able to perform operations with decimals. Add and subtract decimals, with and without the use of digital technologies, and use estimation and rounding to check the reasonableness of answers Multiply decimals by whole numbers and perform divisions by non-zero whole numbers where the results are terminating decimals, with and without the use of digital technologies Multiply and divide decimals by 10, 100 and 1000 Find perimeters of parallelograms, trapeziums, rhombuses and kites Choose appropriate units of measurement for area and convert from one unit to another Establish formulas for areas of rectangles, triangles and parallelograms and use these in problem solving Calculator skills – rounding to a given number of decimal places

Solve problems involving duration, including using 12-hour and 24-hour time within a single time zone Solve problems involving international time zones Calculator skills: Use DMS key			Given coordinates, plot points on the Cartesian plane, and find coordinates for a given point. Describe translations, reflections in an axis, and rotations of multiples of 90° on the Cartesian plane using coordinates.			Identify and name parts of circles Investigate the concept of irrational numbers, including . Investigate the relationship between features of circles, such as the circumference, radius and diameter; use formulas to solve problems involving circumference. Calculator skills: use pi and perform calculations		Construct sample spaces for single-step experiments with equally likely outcomes. Assign probabilities to the outcomes of events and determine probabilities for events. Identify complementary events and use the sum of probabilities to solve problems.
