

TURRAMURRA

HIGH SCHOOL

Device requirement for Turramurra High School

Turramurra High School has undergone an evolution in teaching and learning over the past three years. Part of this evolution has been the introduction of collaborative online tools and programs such as Google Apps for Education, and Microsoft 365. These tools are allowing teachers to provide a richer and more engaging learning experience, providing the students with the opportunity to gain skills that are essential in a modern world. To engage effectively in the learning process, students will require a personal device.

The Technology Team at Turramurra High School, have developed a document [THS Student Device Specifications](#) outlining the minimum requirements for devices used by students. This can be found on the school website at the following address:

<https://turramurra-h.schools.nsw.gov.au/supporting-our-students/student-devices/byod-documents.html>

The school expects every student to have a device that adheres to the minimum requirements outlined in the document stated above. Students are expected to bring their device to school every day.

If your child is unable to access a device, please contact the school and we will work with you to arrange a solution.

Students have a yearly subscription to Adobe Cloud which includes a variety of Adobe products such as Photoshop and Premiere, Microsoft 365, and access to Google Suite with access to most Google for Education products as well as unlimited cloud storage. All these are provided by the Department at no cost to the student and are subject to licence agreements by the Department.

Please be aware that there are devices available which allow for pen input. While they can be very useful for subjects such as mathematics and visual arts and assist in keeping handwritten notes/diagrams and typed text together, they can be very expensive and appropriate protection must be considered.

A limited number of laptop lockers are available through the front office for storing devices.

The IT team provides support to connect devices to the school wireless network, but only limited support can be provided for individual issues with student devices. Also, students do not have access to the network drives or printers at school through their personal devices.
